

CivicOS

Business Requirements Document

Generated by Vellum AI

Executive Summary

CivicOS is an AI-powered civic accountability platform designed to help citizens identify the right government department for their issues and track complaint progress. The platform aims to simplify the process of interacting with government services, making it more efficient and transparent for citizens. The target audience for CivicOS includes all citizens who interact with government services. By providing an easy-to-use platform, CivicOS aims to increase citizen engagement and satisfaction with government services.

Problem Statement

Current Situation: Citizens currently face difficulties in navigating the complex structure of government departments to find the right office for their issues, leading to frustration and delays in resolving their problems.

- Difficulty in identifying the correct government department for their issues
- Lack of transparency in the complaint resolution process
- Inefficient tracking of complaint progress

Impact: The current situation results in wasted time, increased frustration, and a lack of trust in government services, ultimately affecting the overall quality of life for citizens.

Objectives

- Develop an AI-powered civic accountability platform that can accurately route citizen complaints to the correct government department within 6 months
- Achieve a user satisfaction rate of 85% or higher within the first year of operation
- Reduce the average complaint resolution time by 30% within the first year of operation

Scope

- ✓ AI-based semantic search for department identification
- ✓ Intelligent routing of citizen complaints
- ✓ RTI application generation and submission
- ✗ Integration with existing government databases for real-time updates
- ✗ Development of a mobile application for CivicOS

Stakeholders

Role	Responsibility
------	----------------

Citizen	Using the platform to submit complaints and track progress
Government Department Representative	Receiving and resolving complaints submitted through the platform

Functional Requirements

ID	Requirement	Priority
FR-1	AI-based department identification	High
FR-2	Intelligent complaint routing	Medium
FR-3	RTI application generation and submission	Medium
FR-4	Complaint tracking and progress updates	Medium
FR-5	User dashboard for complaint management	Medium

User Stories

US-1 — As a *Citizen*, I want *To be able to easily identify the correct government department for my issue*, so that *I can submit my complaint to the right department and get a timely resolution*

US-2 — As a *Government Department Representative*, I want *To receive complaints submitted through the platform in a timely and organized manner*, so that *I can resolve the complaints efficiently and effectively*

Technical Architecture

CivicOS will be built using a micro services architecture, with separate services for department identification, complaint routing, and RTI application generation. The platform will utilize a cloud-based infrastructure for scalability and reliability.

Tech Stack: Node.js, React, MongoDB

SWOT Analysis

Strengths:

- AI-powered department identification and complaint routing
- User-friendly interface and dashboard
- RTI application generation and submission

Weaknesses:

- Dependence on government data and support
- Limited scope and functionality for the MVP

Opportunities:

- Growing demand for digital government services
- Potential for expansion to other government services and departments

Threats:

- Competition from existing government portals and private platforms

- Regulatory challenges and changes in government policies

Risks & Mitigations

Risk	Probability	Impact	Mitigation
Dependence on government data and support	High	High	Establishing strong relationships with government departments and ensuring data access
Competition from existing government portals and private platforms	Medium	Medium	Differentiating CivicOS through its AI-powered features and user-friendly interface

Timeline

MVP Development — 6 months

- Functional AI-powered department identification and complaint routing
- User-friendly interface and dashboard

Beta Launch — 3 months

- RTI application generation and submission
- Complaint tracking and progress updates

Idea Validation Summary

Score: 7/10 | **Verdict:** Promising With Gaps

To improve the competitiveness of CivicOS, the team should focus on developing a unique value proposition and differentiating features that set it apart from existing solutions. Additionally, establishing partnerships with government agencies and gathering feedback from early users can help refine the platform and increase its adoption.
